

# Greenhouse Gas Services

## Greenhouse Gas Services

EPS provides a full range of environmental and sustainability services for industrial, commercial, and governmental organizations. To help meet the growing needs in the area of greenhouse gas management, EPS offers the following services:

### Greenhouse Gas Inventories and Carbon Footprint Determinations

Many organizations now need to estimate their greenhouse gas emissions and/or carbon footprint to meet the requirements of mandatory and voluntary reporting programs. To better understand the potential implications of greenhouse gas reduction requirements, organizations also benefit from an emissions inventory. EPS prepares properly-documented, accurate inventories and carbon footprint determinations in accordance with standard protocols, including:

- The Climate Registry General Reporting Protocol
- World Resources Institute/WBCSD GHG Protocol
- U.S. EPA Climate Leaders Guidance

Depending on the requirement to be met, EPS assists our clients with defining the scope of the inventory and deciding which protocol should be followed. The results of these inventories are provided in the formats needed to meet the client's needs, whether for submittal to an agency or for communicating to organizational leadership or other stakeholders.

In addition to facility-level and entity-level inventories, EPS prepares inventory calculations for the quantification of greenhouse gas reductions from projects - both for completed and potential reduction projects.

EPS also assists our clients with developing internal procedures for ongoing management of greenhouse gas emissions data.

### Greenhouse Gas Strategy

EPS assists our clients with identifying potential greenhouse gas reduction opportunities, including energy efficiency improvements and carbon offsets. EPS also helps our clients examine historical and future activities to determine which projects may warrant greenhouse gas reduction documentation.

### Third-Party Verification and Validation

EPS provides independent third-party verification and validation of greenhouse gas inventories in accordance with standard protocols, including ISO14064-3. EPS completes verification and validation projects with the highest ethical standards and follows all protocol- and program-specific requirements.

**EPS is about the business of the environment.<sup>sm</sup>**

EPS is a consulting firm that has helped companies for more than a decade with an interdisciplinary team of experts focused on identifying and facilitating business opportunities and sustainability strategies that maximize value and drive profitable growth. EPS helps its clients maintain regulatory compliance, aim for environmental excellence, and achieve high standards of corporate responsibility—all as elements of profitable growth. Our professional experience acquired through service in commercial, industrial, and governmental sectors provides innovative and cost-effective solutions to our clients' environmental and corporate responsibility needs.
